PROFILE

Backend & AI Engineer experienced in building cloud-native .NET/Python applications, intelligent automation systems, and LLM-powered solutions. Skilled in backend development, AWS deployment, data analytics, and AI-driven product engineering.

TECHNICAL SKILLS

Languages: C#, Python, Java, SQL

Frameworks: ASP.NET Core, .NET, React, Angular

Databases: PostgreSQL, SQL, MySQL

Cloud & DevOps: AWS (EC2, Elastic Beanstalk, S3), Docker, Git, GitHub, GitLab

AI/ML: LangChain, Langflow, LangGraph, Google Gemini, RAG, Prompt Engineering, Machine Learning

Tools & Concepts: REST APIs, Microservices, System Design, OOP, Data Analytics, Pandas, Selenium

EDUCATION

Vellore Institute of Technology

Chennai, India

Bachelor of Technology in Computer Science Engineering

2022 – 2026

- **Achievement:** Ranked in the top 5% university-wide as a VIT Top Coder.

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Incedo Inc.

Chennai, India (10/2025 – Present)

- Engineered an AI-powered portfolio simulation and advisory platform enabling real-time valuation, volatility analysis, and scenario-based investment forecasting.
- Developed a C# service-layer backend and AI advisory pipeline using Google Gemini, delivering deterministic investment recommendations through structured prompting and fallback workflows.
- Developed and deployed a full-stack corporate Travel Desk platform using ASP.NET Core, Angular, and PostgreSQL on AWS Elastic Beanstalk, integrating S3-based asset storage and secure cloud-hosted APIs.

Part-Time Developer | Vittae-money

Chennai, India (07/2024 – 08/2024)

- Enhanced backend APIs and third-party integrations for a financial services platform, improving system reliability and report generation workflows.
- Engineered a highly accessible customer mutual fund report generator in PDF format, drastically refining user data retrieval and overall user experience

Summer Intern | Vittae-money

Chennai, India (06/2024 – 07/2024)

- Automated Discounted Cash Flow (DCF) intrinsic valuation models by building a production-ready application leveraging Python, Selenium, and Pandas frameworks.
- Boosted business process efficiency by 95% using data manipulation techniques to slash core calculation times from hours down to minutes.

PROJECTS

Autonomous AI Coding Agent | Python, Google Gemini, AST

- Engineered a fully autonomous AI coding agent using Gemini function-calling, tool orchestration, and iterative debugging workflows to automate software development tasks.
- Designed an isolated runtime execution engine with a self-healing loop that runs targeted scripts, captures exceptions, and iteratively generates unified diff patches for surgical code fixes.
- Implemented AST-based syntax validation and sandboxed file execution to ensure secure code generation and prevent invalid runtime modifications.

Veritas: LLM-Powered Fake News Detection & RAG System | Python, LangChain, Streamlit

- Architected an explainable AI pipeline using LangChain, Streamlit, and Retrieval-Augmented Generation (RAG) to extract claims from dynamic web content and validate factual credibility in real-time.
- Designed a deterministic LLM reasoning framework to evaluate source credibility data and generate human-readable reasoning summaries.
- Optimized data retrieval latency to under 100ms and minimized API costs by implementing an efficient local caching mechanism using TinyDB.

E-commerce Customer Segmentation | Python, K-Means, Langflow

- Processed 28 features across 1,000 users using K-Means and a custom-weighted RFM model, achieving a Silhouette Score of 0.87.
- Integrated an automated AI marketing system via Langflow and Google Gemini to translate raw segments into targeted campaign strategies.

CERTIFICATIONS

AWS Certified Cloud Practitioner

AWS Agentic AI Technical Partner
